Description
UNSAVED CHANGES
This module facilitates seamless communication and transactions between tourists and registered tour guides through both voice and text-based interfaces. Tourists can search for guides by language, location, specialization, and price range using natural language queries. The system displays comprehensive guide profiles, including ratings, reviews, and verification status (verified or non verified).[2] It supports full booking workflows, allowing tourists to request, confirm, or cancel bookings directly through the web interface or AI chat agent. Integration ensures secure transactions. After completing a trip, tourists can submit feedback and ratings, which update guide trust scores and influence future recommendations. This function ensures a

ok 13:29
20/01/2026
Hi ma'am can I meet now 13:30
Yes 13:48
came ma'am 13:55
Research Paper - DRAFT_01.doc
DOC • 203 kB
Hi ma'am my research paper can you plz check and give any suggestions to change 21:56
17/02/2026
clearly mention the novelty of the research.Needs to refine the literature review,it should have a compariosn on how your system is better than others done previously.You need to mention why those staed technologies were used.State Number of test scenarios,Number of booking flows tested ,Criteria for AI response accuracy.
